

# Tech Global Unveils LG W2242P 22" LCD

## Touch Screen Display

**LG's 22" Wide LCD is the newest touch screen display to Tech Global's product lineup featuring Dynamic Touch Capacitive technology.**

April 22, 2010 – Tech Global announced today that they have integrated their Dynamic Touch capacitive touch technology into LG's W2242P LCD display. This broadens Tech Global's product offering and officially brings the LG brand into their line of OEM LCD manufacturers. Other manufacturers include NEC, Dell and HP.

The TGTSC-LGW2242P-D showcases a sleek wide-screen design with a seamless integrated high-performance surface capacitive touch screen. Applications for the 22" LG touch screen include hospitality, Point-of-Sale(POS), kiosks, and medical. The LG display itself features a commercial LCD panel with an amazing 8000:1 digital fine contrast ratio and a stand that is height, pivot and tilt adjustable.

The surface capacitive touch technology integrated into the LG 22" screen is Tech Global's own, allowing for over 350 million touches, greater durability and more accuracy than traditional surface capacitive touch. Dynamic Touch is also unaffected by surface contaminants and is medical glove touch capable. In addition to touch screens, Tech Global also offers protective screen options for the LG W2242P and all other Tech Global products as well as mounting solutions.
